Authorization for this examiner's amendment was given in a telephone interview with Richard Myers on June 8, 2005.

The application has been amended as follows:

In the claims:

Claim 1. A method of using a salivary biomarker to differentially diagnose carcinoma of the breast in a human test subject, said method comprising:

providing a salivary secretion specimen from a human subject to provide an individual salivary biomarker diagnostic for carcinoma of the breast, said biomarker soluble in said salivary secretion and selected from the group consisting of cancer antigen 15-3, tumor suppressor oncogene protein 53, oncogene c-erbB-2 and combinations thereof;

using the salivary secretion concentration of said individual biomarker to compare with a protein biomarker reference panel, said reference panel including at least one of cancer antigen 15-3, tumor suppressor oncogene protein 53, oncogene c-erbB-2 protein biomarker, [oncogene protein 53 protein biomarker,] and combinations thereof; and

differentially identifying the diagnosis for said subject indicated by said comparison.

Art Unit: 1642

Claim 10. A post-operative method of monitoring the inhibition of breast tumor growth, said method comprising:

providing a human test subject, said subject post-operative to the removal of a malignant breast tumor;

providing a salivary secretion specimen from said subject to develop a post-operative protein biomarker panel, said panel having constituents selected from the group consisting of cancer antigen 15-3, tumor suppressor oncogene protein 53, oncogene c-erbB-2 protein biomarker and combinations thereof;

comparing said post-operative biomarker panel to compare with a pre-operative biomarker reference panel for said subject; and

determining the post-operative inhibition of breast tumor growth by monitoring at least one constituent of said biomarker panels.

Claim 13. The method of claim 10 wherein said pre-operative and said post-operative panels include a [C-erbB-2] c-erbB2 protein biomarker constituent.
